Eric Jacobowitz

Full-Stack Software Engineer | AI & Healthtech

Miami, FL | (954) 243-3376 | EJacoby.dev@gmail.com | linkedin.com/in/eric-jacobowitz | github.com/EJacoby515

Fullstack engineer building secure, compliant software in healthcare AI. Previously led engineering at a fintech startup; independent operator behind a live mental-health platform with a RAG-backed AI guide.

TECHNICAL SKILLS

Languages & Frontend: TypeScript, JavaScript (ES6+), Python, React, React Native, Next.js, Vite, HTML5, CSS3

Backend & Data: Node.js, Express, Flask, PostgreSQL, MySQL, Firebase, REST APIs

Cloud & Infra: AWS (EC2, RDS), Auth0, CI/CD, Git, Unit Testing

AI: LLM APIs, RAG, prompt engineering, AI-assisted development workflows

EXPERIENCE

Software Engineer II, Innovation (Innovation Solutions Engineer) | Independent Living Systems
Miami, FL *09/2026 – Present*

- Build and ship secure, HIPAA-compliant healthcare software on the Innovation team, translating requirements from healthcare professionals, data scientists, and product managers into production systems.
- Leading the migration off a legacy HL7 engine and modernizing the eCare stack for improved interoperability and reliability.
- Contributing to an internal, enterprise AI platform built on in-house Claude-based agents, with human-in-the-loop design to keep PHI protected and compliant.
- Own a Postgres + JSONB settings architecture from design through implementation.

Lead Software Engineer | PushFi
Remote *10/2025 – 09/2026*

- Worked directly with two non-technical founders translating business logic into system architecture; owned deployment decisions and engineering direction.
- Architected and shipped MVP in 30 days: lender-matching engine, KYC integrations, borrower onboarding, and agent admin tooling on React, Node, and PostgreSQL.
- Scrapped inherited NextAuth and rebuilt authentication on Auth0 to meet compliance requirements in the fintech regulatory environment.
- Ran engineering standups Mon/Wed/Fri and the Monday leadership debrief; held hiring authority for the engineering team.
- Mentored junior developers with file-level blueprints and code snippets, getting them shipping production code on the lending platform.

Software Engineer I | Helios Technologies
Remote *08/2024 – 09/2025*

- Restructured prompts and context-window handling for an AI companion product, cutting latency and tightening response accuracy.
- Hardened retry and error handling around LLM calls so flaky model responses stopped breaking conversations.
- Built a reusable TypeScript component library with Vite that sped up every feature ship that followed.
- Moved environment config from client to server, enabling fixes without shipping a new build.
- Built and maintained REST APIs; partnered with design and product to turn rough requirements into UIs that converted.

Software Engineer Intern | CodeAlpha
Remote *07/2023 – 07/2024*

- Built cross-platform mobile apps in React Native with modular components and clean state management.
- Tuned mobile UI/UX for varied screen sizes and device constraints, lifting engagement.

Software Engineer Intern | Resonate
Remote *01/2023 – 06/2023*

- Built a real-time chat system in React Native and PocketBase, cutting query overhead 40%.
- Improved data persistence and retrieval 30% with a tighter status-lifecycle model.
- Rewrote the TypeScript navigation layer with stricter types, dropping runtime regressions 25%.

Software Engineer Intern | OpenQQuantify
Remote *06/2022 – 12/2022*

- Built frontend components in modern JS frameworks to visualize quantum datasets; collaborated with researchers to implement quantum algorithms.

SIDE VENTURE & PROJECTS

HeadStrong (Founder & Engineer) · ***Mental health platform for men, live users***

- Independent venture: React Native, Expo, TypeScript on Firebase with real-time sync for mood tracking, activity streaks, and secure peer communities.
- Shipping a RAG-backed LLM companion for context-aware journaling and check-ins; own product, engineering, and roadmap end-to-end.

AI-Powered Resume Chatbot

- Interactive AI interface over my work history; OpenRouter API, React, TypeScript, @chatscope/chat-ui-kit-react with retry and error handling.

EDUCATION

B.S. Computer Science, Florida International University · 2022

ADDITIONAL

Active firefighter/paramedic on a 24-on/48-off schedule; engineer full-time around it.
